

Integration: Endur

Purpose

At around 3pm each day when no further sales contracts can be signed, today's extract from the Pricing Tool to ENDUR will be run. This is manually triggered by the business.

The extract relates to all sales during the day so that future volumes are known to ENDUR for the purposes of hedging

Currently the business check the data and manually adjust it before sending the file to ENDUR but if possible the new Pricing Tool can deal with all requirements this manual check and adjustment will not be required

The manual process is to be able to add volumes for products which are not held in the current system. These products are where the calculations are too complex or they are products for customers not in a contract but Orsted still supply them ("fallback" contracts)

Method

The system needs to have a way to indicate that a contract has been hedged so that contracts from previous days which have not already been hedged are included in the data for today's extract.

The volumes from all contracts not hedged already are divided on a monthly basis for the contract period based on the consumption profile of the customer

The Gas volumes are summed based portfolio (grouping of products) and Area (Hub) – note that 1 contract can have volumes for more than 1 Hub

The Power volumes are summed based portfolio (grouping of products) and Peak or Base – note that 1 contract could have Peak or Base or both

If not all products can be configured in the new system, then Orsted would prefer there to be a separate way for users to manually add to the volumes calculated for hedging so that the files created include these manual volumes.

If this requirement can be met the supplier should explain how this will work

The format of the file is CSV and layout should match the current format.

The files should export always a fixed period of data – current year and 5 full years forward, even if there are no volumes for the months.

Values are in MW for POWER and kW for Gas.

The file will be delivered to the predefined path

CSV File Naming Convention

create_ELGASB2B<Country code: DK ><area and price variant: PeakDK2, BaseDK1> - ERLI - <date: dd-mm-yyyy> @ <time: hh:mm:ss>

Only the part of the file name between "create_" and " – ERLI (...)" is being mapped.

Note that the area (Hub) and PeakDK2, BaseDK1 come from the customer profile

Examples:

create_ELGASB2BDK BaseDK1 - ERLI - 06-05-2015 @ 14.36.05 (Power because of the BaseDK1)
 create_ELGASB2BDK PeakDK2 - ERLI - 06-05-2015 @ 14.36.05 (Power because of the PeakDK2)
 create_DNB2BDK TTF - ERLI - 06-05-2015 @ 14.36.05 (Gas because of the Hub name TTF)
 create_DESABB2B TTF - ERLI - 06-05-2015 @ 14.36.05 (Gas for Sweden because of the Hub name TTF and DESABB2B)

Principles for file format:

CSV files are generated depending on which portfolio they come from.

Name of the portfolio is not a part of the file name, but there should be a mapping used, preferably configurable by Orsted. Not all products / portfolios are hedged and so do not have file mapping

Example Portfolios (not a full list)

Portfolio	Product	File	Commodity
Fastpris	_PO_ELGASB2BDK	ELGASB2BDK	Power (Peak & Base)
Fastpris puljeoptimering	_PO_ELGASB2BDK	ELGASB2BDK	Power (Peak & Base)
Spotpris	_PO_ELGASB2BDK	ELGASB2BDK	Power
Risk Management			
Price Management			
Mark-up Fast	_PO_ELGASB2BDK	ELGASB2BDK	Power (Base only)
THE	THE_DNB2BDK	DNB2BDK THE_DAY	Gas

For Power there will be generated up to 4 files per portfolio – divided on the different area and price variants. Exmaples are :-

Portfolio	CSV Name
Fastpris	create_ELGASB2BDK BaseDK1 - ERILI – DD-MM-YYYY @ HH.MM.SS.csv create_ELGASB2BDK BaseDK2 - ERILI – DD-MM-YYYY @ HH.MM.SS.csv create_ELGASB2BDK PeakDK1 - ERILI – DD-MM-YYYY @ HH.MM.SS.csv create_ELGASB2BDK PeakDK2 - ERILI – DD-MM-YYYY @ HH.MM.SS.csv
El med fast mark-up	create_ELGASB2BDK CfdDK1 – ERILI - DD-MM-YYYY @ HH.MM.SS.csv create_ELGASB2BDK CfdDK2 – ERILI - DD-MM-YYYY @ HH.MM.SS.csv create_ELGASB2BDK SYS – ERILI - DD-MM-YYYY @ HH.MM.SS.csv create_ELGASB2BDK PeakDK1 - ERILI – DD-MM-YYYY @ HH.MM.SS.csv create_ELGASB2BDK PeakDK2 - ERILI – DD-MM-YYYY @ HH.MM.SS.csv create_ELGASB2BDK BaseDK1 - ERILI – DD-MM-YYYY @ HH.MM.SS.csv create_ELGASB2BDK BaseDK2 - ERILI – DD-MM-YYYY @ HH.MM.SS.csv

Different portfolios can be mapped to the same CSV file name

For example:

Portfolio	CSV Name
Finansiel puljeoptimering	create_DNB2BDK NCG - ERILI - DD-MM-YYYY @ HH.MM.SS.csv
Finansiel optimering "kundenavn"	create_DNB2BDK NCG - ERILI - DD-MM-YYYY @ HH.MM.SS.csv

1. If there is no data for the entire section of dates (month BID/ASK) then the whole section of the file including all the rows referring to that section should not be included in the file.
2. The volume values in the file are always absolute (no sign) – ASK or BID entries are introduced to indicate the sign.
3. The first column in the file has to contain row numbering from 1 to as many lines as there is in the file.

File format – details:

Row nr	Details	Details specification	Volumes	Comment
1	package_operation	create		Fixed text
2	package	ELGASB2BDK SYS - ERILI - 26-05-2015 @ 10.40.01		Same as file name
3	package_item	ELGASB2BDK SYS MO - BID - ERILI - 26-05-2015 @ 10.40.01		Headers for the period aggregated sections. MO and BID, ASK indicators are added to the same string as in the file name. The header is only present if there is a value to report in the given section.
4	package_item	ELGASB2BDK SYS MO - ASK - ERILI - 26-05-2015 @ 10.40.01		

5	Item	ELGASB2BDK SYS MO - BID - ERILI - 26-05-2015 @ 10.40.01		Same as corresponding section header from package_item
6	item_name	ELGASB2BDK SYS MO - BID - ERILI - 26-05-2015 @ 10.40.01		
7	product	SYS_ PO _ELGASB2BDK		Fixed combination of text from file name with PO
8	unit_of_measure_vol	MWH/HOUR		Unit of measure for the volumes in the file. MWH/HOUR.
9	delivery_period_start	01-06-2015		Current month
10	delivery_period_end	01-11-2015		Last month of the 5 th year forward.
11	delivery_period_type	MO		Aggregation level: MO, QT or YR.
12	business_partner	ELGASB2BDK		Part of file name text
13	transaction_type	BID		Transaction sign indicator derived from volume value: + = ASK, - = BID
14	business_partner_kam	ERILI		Fixed text
15	data_volume	01-06-2015	1,000	Volumes in kWh split into all the months between start and end of delivery periods (delivery_period_end – 1 month)
16	data_volume	01-07-2015	0,000	
17	data_volume	01-08-2015	3,000	
18	data_volume	01-09-2015	0,000	
19	data_volume	01-10-2015	5,000	
20	Item	ELGASB2BDK SYS MO - ASK - ERILI - 26-05-2015 @ 10.40.01		
21	item_name	ELGASB2BDK SYS MO - ASK - ERILI - 26-05-2015 @ 10.40.01		
23	product	SYS_PO_ELGASB2BDK		
24	unit_of_measure_vol	MWH/HOUR		
25	delivery_period_start	01-06-2015		
26	delivery_period_end	01-11-2015		
27	delivery_period_type	MO		
28	business_partner	ELGASB2BDK		
29	transaction_type	ASK		
30	business_partner_kam	ERILI		
31	data_volume	01-06-2015	0,000	
32	data_volume	01-07-2015	1,000	
33	data_volume	01-08-2015	0,000	
34	data_volume	01-09-2015	2,000	
35	data_volume	01-10-2015	0,000
