PROJECT EXPERIENCE

PROJECT – 2

Nov 2023--Till Date

Project Name : Energy Inspectors.
Client : Energy Inspectors.
Team Size : 8
Role : Salesforce Developer
Environment : Salesforce.com, Force.com

Description:

The project provided a Salesforce platform to support capturing detailed construction information for residential and commercial buildings. It automated the process of measuring each area of a building and ensured adherence to mandatory construction criteria for new homes and buildings. The system enabled technicians to efficiently follow required standards on-site. The measuring modules facilitated accurate estimation of required materials and quality checks essential for construction.

Responsibilities:

- Analyzed new functionalities and provided technical solutions.
- Worked as a Senior Developer to meet business requirements using **Apex Classes, Triggers, and Test Classes**.
- Developed **custom Lightning Web Components (LWC)** to create dynamic, responsive, and reusable UI components.
- Built **parent-to-child and child-to-parent communication** between LWC components.
- Integrated LWC with **Apex controllers** for seamless data retrieval and updates.
- Designed **LWC data tables with inline editing, pagination, and sorting** to handle large datasets efficiently.
- Applied **Lightning Design System (SLDS)** for consistent and responsive UI design.
- Optimized LWC components for **performance and faster load times**.
- Handled complex **event handling and navigation** using Lightning Navigation Service.
- Implemented **conditional rendering and dynamic form validations** in LWC.
- Integrated **third-party libraries** within LWC components to enhance user experience.
- Developed **REST services** and integrated external applications via API callouts.
- Managed data loading and migration using **Apex Data Loader**.
- Created **unit test scenarios** to ensure proper business testing.
- Developed email services to automatically update Work Order statuses through email responses.
- Designed and implemented **validation rules and Apex triggers** to enforce business logic.
- Deployed changes across sandboxes using **Change Sets**.

Project -1 -

June 2021 – Nov 2023

Project Name : HP E-portal
Client : HP E-portal
Team Size : 8
Role : Salesforce Admin & Developer
Environment : Salesforce.com, Force.com

Description:

HP E-Portal is a consumer-facing portal built on Salesforce Sales Cloud to manage CRM processes for retail customer transactions. The application enables business brokers to list products for sale, allows customers and prospects to view and purchase products, and facilitates seamless daily operations for agents and outlets. The system helps track all agent activities, sales transactions, and customer engagements effectively.

Responsibilities:

- Configured **Marketing Campaigns, Web-to-Lead, Auto-Response Rules, Lead Assignment, and Lead Conversion** to support sales and marketing operations.
- Developed **Apex Classes, Triggers, and Test Classes** to meet complex business logic and automation requirements.
- Created **Custom Visualforce Pages and Components** to customize Salesforce UI and support public-facing websites using Force.com Sites.
- Debugged and resolved Apex issues using **Debug Logs and System Log Console** to ensure smooth functionality and compliance with governor limits.
- Managed **data quality and security** using Picklists, Dependent Picklists, Record Types, Tab Permissions, and Field-Level Security.
- Performed **deployments using Change Sets** across multiple Salesforce sandboxes and production environments.

EDUCATION

- **B. Tech, Jawaharlal Nehru Technological University, Hyderabad (2019)**

ADDITIONAL INFORMATION

- Strong troubleshooting and debugging skills in Salesforce using System Logs and Debug Logs.
- Passionate about continuous learning and adopting Salesforce best practices.
- Effective team player with excellent communication and leadership abilities.
